GUIDELINES FOR OBTAINING INFORMED CONSENT

Obtaining informed consent and maintaining confidentiality of information is an integral part of all post-exposure testing procedures. Therefore, appropriate pre- and post-test discussion must accompany testing for blood and body fluid exposures.
The following should be discussed with the SOURCE person:
Why/how their test results are needed for post-exposure management of the exposed person
That consent is needed for disclosure of their test results to:
Their own follow-up physician
The exposed person's follow-up physician
The exposed person's worksite occupational health and to WorkSafe BC (in the instance of an occupational exposure)
The exposed person will not be informed of their test results, or their identity. (The exposed person will only be told whether or not to continue HIV post exposure prophylaxis.)
How they choose to be contacted in the event of a positive test result.
(The above enables appropriate post-test follow-up management and support - especially in the event of a positive test result)
Obtain consent from the EXPOSED person for disclosure of their lab results to their:
Worksite occupational health and WorkSafe BC
Follow-up physician
Inform the SOURCE and EXPOSED person that:
HIV testing may be done:
Nominally – in which the test is conducted and reported using the client's full name, address and contact information
Or
Non-nominally – in which the test is conducted using initials as per agency standards
Positive HIV results will be reported to the Medical Health Officer using the nominal or non-nominal identifiers. Non-nominal HIV reporting is identified through checking a tick box on the laboratory requisition form.
For all HIV positive results (nominal or non-nominal), a case report will also be sent to public health. A public health nurse with specialized training will be responsible for the required follow-up by calling the testing physician to offer support for the newly positive client, and assisting with partner counseling or other identified needs. Follow-up will occur whether testing is ordered by either the nominal or non-nominal option.
Testing for HBV and HCV can only be done nominally.
Positive HBV and HCV test results will be forwarded to public health for appropriate follow-up and management.
