

# HEALTH CONNECT STUDY

WHAT YOU NEED TO KNOW!

625 POWELL STREET,  
VANCOUVER, BC V6A 1H2

236-886-6675

WWW.BCCFE.CA

## BASELINE

A rapid point-of-care (POC) HCV test and a 30-minute questionnaire.

01

02

## INTERVENTION

Participants will be offered dry blood spot (DBS) testing for HCV/HIV/-Syphilis (as part of the H2H SCS SoC) and a referral to the H2H clinic (if unattached to primary care)

## RESEARCH FOLLOW UP

All participants will be invited to engage in one follow-up questionnaire 12 months after the baseline.

04

## CHECK-IN VISIT

The HCV POC test will be available immediately following the baseline questionnaire. The DBS results will take approx. 3 weeks to process. Participants will be invited back for a check-in visit one month after the baseline in order to facilitate results, STBBI learning and linkage to care. If a participant is already attached to care, the team will correspond with the participant's primary care provider informing them of the participant's status and ensuring they too have linkage to care.
